

Chronicles Saga — Team Handoff

Everything the three of us need to start building. Read in this order.

1. Find your own first steps

first-steps/ — one file per person. Do the steps in order; each has a time estimate and a “done when.”

- **first-steps/ARINZE.md** — the minigame system (build + wire)
- **first-steps/BENJAMIN.md** — Chapter 12 endgame
- **first-steps/LUCA.md** — interface & polish

2. Read the whole board

WORK_DIVISION.md — where the project stands today, everything that’s left, all three lanes, and how they interlock. Read the parts that aren’t yours; that’s the point of it.

3. Reference material

- **MINIGAME_PROPOSAL.md** — the nine proposed minigames, where they go and why, plus the chapters deliberately left alone. Ben has veto on this.
 - **MINIGAME_CONTRACT.md** — the frozen interface between minigames and the app shells. Arinze and Luca both build against it. Ben doesn’t need it.
-

The 30-second version

Season One is **done and in the game** — all twelve chapters, three endings, validating clean. What’s left is presentation and mechanics, not story.

Three lanes. Each is a **whole system owned by one person**, not a stage in a pipeline — nobody hands work to anybody.

	Owns
Arinze	The minigame system — host apps, all 10 games, and the wiring. One or two games a week, each taken all the way to playable-in-story.
Benjamin	The Chapter 12 endgame — the PC multi-feed interface, the three ending screens, and the story calls only he can make.
Luca	The interface — ending screen, presentation polish, and the bug list. Independent of the minigame work entirely.

Two dependencies to clear immediately:

1. **Arinze commits the working tree** — nobody branches off an uncommitted base. 10 minutes.
2. **Luca ships a hosted build** — Ben can't run the repo, so he can't play the game he wrote. His whole lane is gated on this. 1 hour.

And one thing before any feature work: **all three of us play the full season, start to finish.** We have a finished twelve-chapter game none of us has experienced end to end. Every priority call gets sharper afterward.
