

First Steps

One file per person. Read yours top to bottom, do the steps in order.

- ARINZE.md — the minigame system (build + wire)
- BENJAMIN.md — Chapter 12 endgame
- LUCA.md — interface & polish

Everything here assumes you've skimmed docs/WORK_DIVISION.md (the whole board) and, if you're writing code, docs/MINIGAME_CONTRACT.md.

One team-wide dependency before anything else: Arinze commits the working tree. Nobody branches off an uncommitted base. It takes ten minutes and it's step 1 of ARINZE.md.

Second team-wide item: Ben can't run the repo, so somebody has to put a playable build somewhere he can reach it. That's step 3 of LUCA.md, and until it's done Ben can't review anything against the real thing.
